Medical Web Technologies Passes One Million Patient Milestone

Web-based Preoperative System Provides Patients Greater Convenience while Streamlining Processes for Hospitals and Surgery Centers

Scituate, MA – April 24, 2012 – [Medical Web Technologies](#) today announced a significant milestone; more than one million patients are now utilizing the company's web-based [preoperative system](#), One Medical Passport. High patient utilization is attributed to the system's ease of use and convenience.

Preop screenings conducted over the phone are inconvenient for patients, time consuming for nurses and often prone to errors as patients are rushed and rarely have the necessary information on hand. One Medical Passport is a patient-friendly system that replaces the antiquated process of phoning patients in advance of their procedure.

Leveraging the Internet, patients complete their preoperative assessment when and where they want. The process is much more efficient, convenient, and cost effective for patients, medical facilities, and physicians.

"Because just over 70 percent of our patients create their own One Medical Passports, our nursing staff spends less time asking questions and recording answers, and more time evaluating and discussing the critical elements of a patient's history," said Janis Licari, vice president quality management for Midwest Surgical Management Group. "For those patients unable to or not wanting to create a Passport themselves, the process is so streamlined our nurses do it for them in no time; it is especially easy to update information when a patient returns for a subsequent visit. Patient feedback has been extremely positive. In fact, patients continue to rate their experience with One Medical Passport extremely high when returning our patient satisfaction surveys."

One Medical Passport guides patients through the process of submitting complete demographic, insurance and medical history information. Information is stored in a secure data center. Questions are tailored to each individual patient and follow-up questions are automatically asked for specific medical conditions. Patients can't advance until they have completed all of the required questions in each section.

Once complete, information is immediately available for download by the medical facility and physician the patient has selected. One Medical Passport also acts as an online personal health record for patients which they can easily update whenever needed.

About Medical Web Technologies

Medical Web Technologies, www.mwtcorp.com, provides innovative, Web-based medical information solutions that allow patients and healthcare providers to easily create, store, and distribute a patient's complete medical information. MWT's solutions, One Medical Passport and SourcePlus Passport, are used nationwide in a variety of settings that span fast-paced ASCs and major medical centers to solo practitioner physician offices.
